

# About Cementation

Cementation is an underground mine contracting and engineering company, providing mine development and production services for Clients throughout the world. We are focused on safety and committed to our ultimate goal of zero harm within our operations.

We understand that mine owners are looking for safe work, engineering that adds value, and a contractor willing to work with them, and together meet budget and schedule challenges head on. Cementation is and has always been that contractor. Our *best for project* philosophy embodies all of these concepts.

In 1914 Albert Francois patented the *Cementation Process* which today the mining industry knows as grouting. In 1919 the Cementation Company was formed to introduce and apply grouting techniques within the mining industry and the rest is history. Since 1919 the Cementation group has worked on projects around the world, applying innovative solutions to technically challenging projects. Today we still embrace the innovative spirit which was the origin of the company.
